Create a Cloning of a VM and Test it by loading the Previous Version/Cloned VM

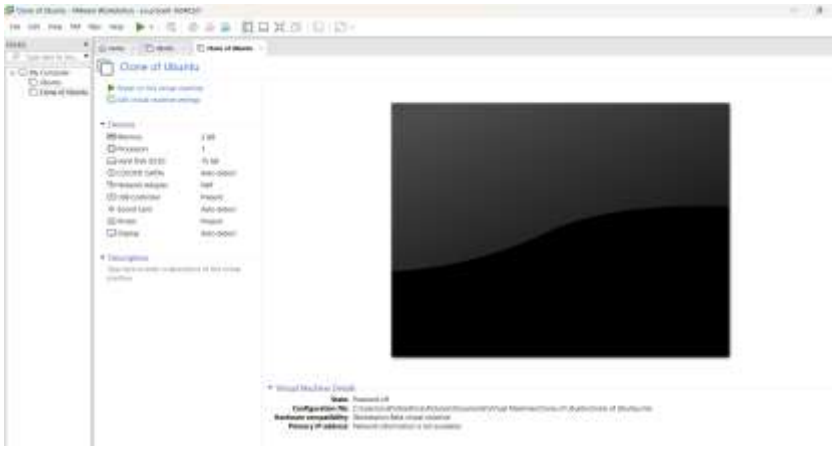

AIM

To clone an existing virtual machine using VMware Type-2 virtualization software and test the cloned VM by loading and running it.

ALGORITHM

1. Open VMware Workstation on the host computer.
2. Select the existing virtual machine that needs to be cloned.
3. Shut down the virtual machine before cloning it.
4. Open the **VM** menu and select **Manage → Clone**, if available.
5. Choose the current state or an appropriate snapshot as the cloning source.
6. Select **Create a full clone** and click Next.
7. Enter a name for the cloned virtual machine and choose its storage location.
8. Click Finish and wait for the cloning process to complete.
9. Select the cloned VM and click **Power On**.
10. Verify that the cloned virtual machine loads and operates successfully.

OUTPUT

RESULT

Thus, the cloning of a virtual machine was performed successfully using VMware, and the cloned VM was tested by loading and verifying its operation.
