Create a Snapshot of a VM and Test it by loading the Previous Version/Cloned VM

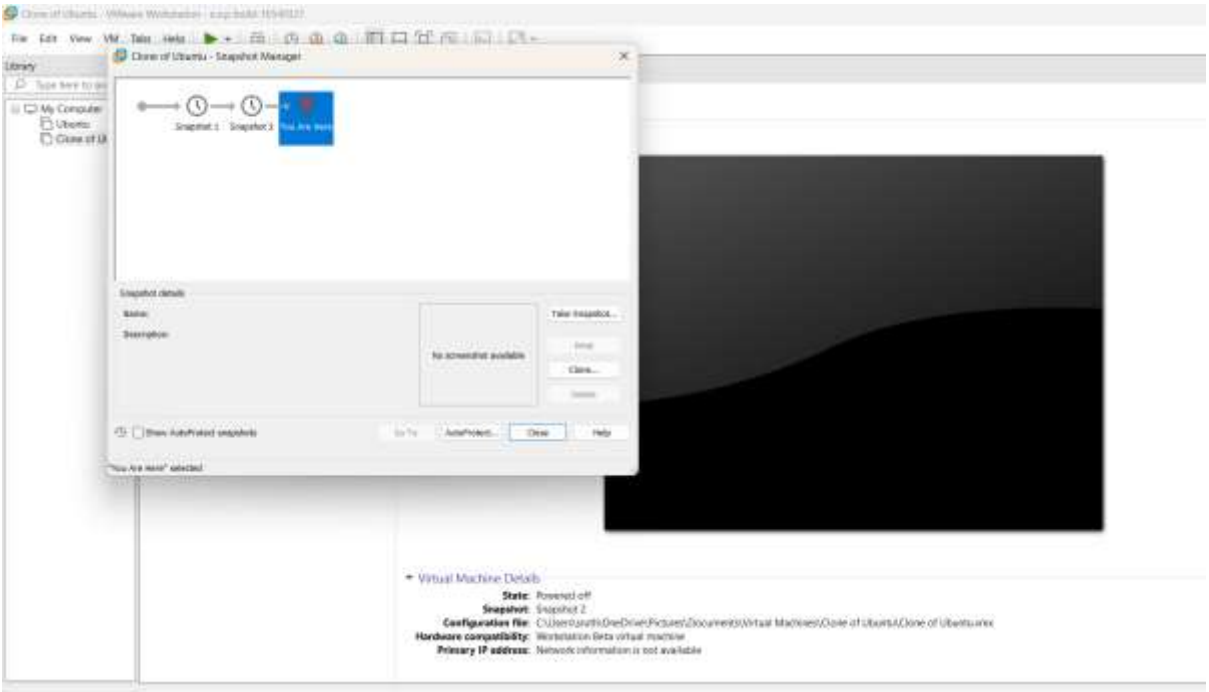

AIM

To create a snapshot of a virtual machine using VMware Type-2 virtualization software and test it by restoring and loading the previous state of the VM.

ALGORITHM

1. Open VMware Workstation on the host computer.
2. Select the virtual machine to be used for the experiment.
3. Start the VM and ensure that the operating system is working properly.
4. Open the **VM** menu and select **Snapshot → Take Snapshot**.
5. Enter a suitable snapshot name, such as Ubuntu-Before-Changes.
6. Add a description if required and click **Take Snapshot**.
7. Make a small change inside the virtual machine, such as creating a test file.
8. Open the **Snapshot Manager** and select the previously created snapshot.
9. Click **Go To** or **Restore** to return the VM to the saved state.
10. Start or resume the VM and verify that the previous state has been restored.

OUTPUT

RESULT

Thus, a snapshot was created successfully in VMware, and the virtual machine was tested by restoring and loading its previous state.
