Create a Virtual Hard Disk and allocate the storage using VM ware Workstation

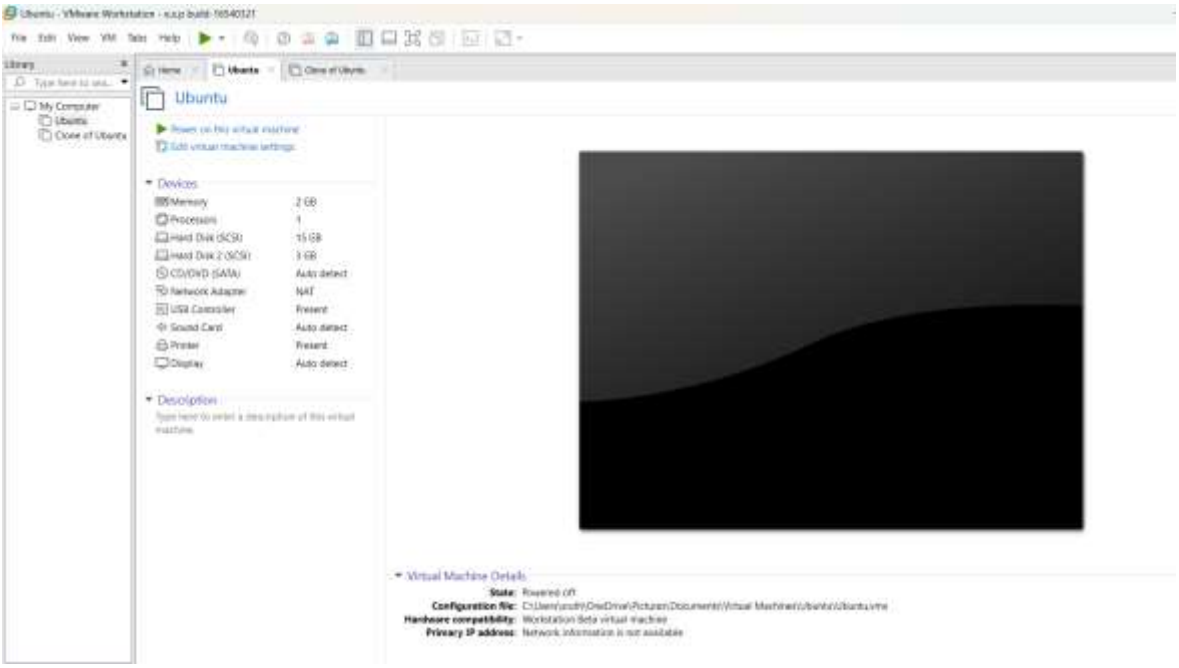

AIM

To create a virtual hard disk and allocate storage space using VMware Workstation virtualization software.

ALGORITHM

1. Open VMware Workstation on the host computer.
2. Select an existing virtual machine or create a new virtual machine.
3. Open **Edit Virtual Machine Settings**.
4. Click **Add** to add a new virtual device.
5. Select **Hard Disk** and click **Next**.
6. Choose the recommended virtual disk type, such as SCSI, and click **Next**.
7. Select **Create a new virtual disk**.
8. Enter the required disk capacity, such as 15 GB.
9. Choose to store the virtual disk as a single file or split it into multiple files.
10. Click **Finish** and verify that the virtual hard disk has been created successfully.

OUTPUT

RESULT

Thus, a virtual hard disk was created and the required storage space was allocated successfully using VMware Workstation.
